

SURVIVABILITY SYSTEMS

EOD PROTECTIVE EQUIPMENT & TOOLS - Med-Eng[®] bomb suits and blast protective ensembles are trusted to save lives in over 100 countries and territories. The EOD[®] 10 sets a new gold standard for protection, mobility and operational capabilities. For tactical missions, the TAC 6 offers lighter weight and modular protection. The complete solutions we offer include personal blast sensors, Hook and Line (HAL[®]) and specialized EOD tools to maximize standoff.

SURVIVABILITY SYSTEMS

ROBOTS, COOLING AND BLAST SEATS - The Avenger is a mid-sized bomb disposal robot with the operational capabilities of many larger sized robots. It is ideal for dealing with the increasing threat of Vehicle-Borned IEDs and other challenging missions in urban centers. Med-Eng thermal management solutions include cooling systems for military vehicle occupants and their mission-critical electronics. These ruggedized systems can be customized for either heating or cooling, depending upon the mission. Med-Eng has fielded over 10,000 blast attenuation seats to protect military vehicle occupants from explosive events.
